# **Hella marine**

***Vision and Innovation***

**Welcome to the Hella marine catalogue, your guide to our marine lighting products engineered for safety, reliability and high performance.**

For over 80 years, Hella marine has been a leading lighting manufacturer. Today highly advanced LED and bulb technologies are applied to produce Navigation Lamps, Deck Floodlights, Search Lamps, Interior and Exterior Lamps and Boat Trailer lighting.

Auckland, New Zealand.

## **About Hella marine**

Hella marine is a worldwide marine lighting specialist represented in over 40 countries. The range was first created in 1925 by Hella KG in Germany and relocated to Austria in 1993.

Today Hella marine is headquartered in New Zealand - a country with a rich maritime history of boat building and yacht racing success.

Hella New Zealand was founded in 1973 to manufacture, market and distribute products. Today our company designs and manufactures innovative lighting solutions for the marine, commercial transport and automotive sectors using advanced LED technology.

Over a decade of LED expertise is now being channelled into sophisticated navigation and lighting systems. With these products, Hella marine is a supplier to yacht and powerboat manufacturers, marine re-sellers and commercial fleets around the world.

Hella New Zealand is certified to ISO 9001:2000.

## International Standards

Hella marine navigation lamps comply with the International Regulations for Prevention of Collisions at Sea (IMO COLREG 72).

This IMO compliance, together with supplementary national requirements, is listed with each navigation lamp series throughout the catalogue.

**Main approval types.**

**IMO**  
COL REG 72

Complies with IMO (International Maritime Organization) requirements under the International Regulations for the Prevention of Collisions at Sea. (IMO COLREG 72) IMO COLREG 72 forms the international basis for legal navigation lighting on vessels.

**BSH**

Approved by the German BSH (Bundesamt für Seeschifffahrt und Hydrographie) and carry BSH type approval numbers. BSH was formerly called DHI (Deutsches Hydrographisches Institut).

**RINA**

Approved by the Italian RINA (Registro Italiano Navale) authority. Approved lamps carry a RINA type approval number.

**USCG**

Complies with USCG (United States Coast Guard) requirements. Lamps carry a marking for minimum visible distance in nautical miles, eg USCG 2 NM.

**ABYC  
A-16**

Complies with ABYC (American Boat and Yacht Council) Navigation Lamp Standard A-16.

For vessels less than 50 metres in length overall, IMO COLREG 72 describes the following minimum visible distances for navigation lamps. Supplementary national approvals may also apply. Distances are in Nautical Miles.

**Vessels less than 12 metres in length:**

White, Red, Green All Round lamps, 2 miles  
Masthead lamp, 2 miles  
Port and Starboard lamps, 1 mile  
Stern lamp, 2 miles  
Tri-colour lamp, 2 miles. (Sailing vessels under sail only)

**Vessels less than 20 metres in length:**

White, Red, Green All Round lamps, 2 miles  
Masthead lamp, 3 miles  
Port and Starboard lamps, 2 miles  
Stern lamp, 2 miles  
Tri-colour lamp, 2 miles. (Sailing vessels under sail only)

**Vessels less than 50 metres in length:**

White, Red, Green All Round lamps, 2 miles  
Masthead lamp, 5 miles  
Port and Starboard lamps, 2 miles  
Stern lamp, 2 miles

## Definitions

## IMO COLREG definitions for navigation lighting.

**“All Round Lamp”**

A light showing an unbroken arc over the horizon of 360 degrees.

All Round Lamps may output white light, red light or green light.

**“Side Lights”**

A green light on the starboard side (Starboard lamp) and a red light on the port side (Port lamp) each showing an unbroken light over an arc of the horizon of 112.5 degrees and fixed to show the light from right ahead to 22.5 degrees (2 points) abaft the beam.

On a vessel less than 20 metres in length sidelights may be combined into one lamp (a ‘Bi-colour’ Lamp) carried on the fore and aft centre line of the vessel.

**“Stern Lamp”**

A white light placed as close as practicable to the stern showing an unbroken light over an arc of the horizon of 135 degrees and so fixed to show the light from right aft for 67.5 degrees (6 points) on both sides of the vessel.

**“Masthead Lamp”**

A white light placed over the fore and aft centre line of the vessel showing an unbroken light over an arc of the horizon of 225 degrees and fixed to show the light from right ahead to 22.5 degrees (2 points) abaft the beam on both sides of the vessel.

**“Tri-colour Lamp”**

On a sailing vessel less than 20 metres in length under sail, the sidelights and stern light may be combined into one lamp positioned on top of the mast. When the sailing vessel is under power, the tri-colour lamp must be switched off and the navigation lamp rules for power driven vessels apply.

# IMO COLREG 72 Lights and Visibility - Powerboats

**IMO COLREG requirements for navigation lighting on powerboats less than 50m LOA (Length Overall).**

Note - Sailboats under motor adopt the rules for Powerboats.

**Powerboats up to 7m. Max 7 knots**

1 All Round White lamp

**Powerboats up to 12m where Masthead and Stern lamps cannot be mounted**

1 All Round White lamp  
1 Port lamp  
1 Starboard lamp

**Powerboats up to 12m where Masthead and Stern lamps cannot be mounted**

1 All Round White lamp  
1 Bi-colour lamp

**Powerboats up to 20m**

1 Masthead lamp  
1 Port lamp  
1 Starboard lamp  
1 Stern lamp

**Powerboats up to 20m**

1 Masthead lamp  
1 Bi-colour lamp  
1 Stern lamp

**Powerboats up to 50m**

1 Masthead lamp  
1 Port lamp  
1 Starboard lamp  
1 Stern lamp

**A vessel less than 50m engaged in trawling**

1 All Round Green lamp  
1 All Round White lamp  
mounted above one another

**A vessel less than 50m engaged in fishing, other than trawling**

1 All Round Red lamp  
1 All Round White lamp  
mounted above one another

**Powerboats towing with a tow length of less than 200m**

In addition to Port, Starboard and Stern lamps  
1 Towing lamp mounted above the stern lamp  
2 Masthead lamps in a vertical line  
(When the tow length exceeds 200m, three Masthead lamps in a vertical line)

**A vessel engaged in diving operations**

1 All Round Red lamp  
1 All Round White lamp  
1 All Round Red lamp  
mounted above one another

**A vessel engaged in pilotage duty**

In addition to Port, Starboard, Masthead and Stern lamps  
1 All Round White lamp  
1 All Round Red lamp  
mounted above one another

# IMO COLREG 72 Lights and Visibility - Sailboats

IMO COLREG requirements for navigation lighting on sailboats less than 50m LOA (Length Overall).

Note - Sailboats under motor adopt the rules for Powerboats.

Sailboats up to 20m under sail

- 1 Port lamp
- 1 Starboard lamp
- 1 Stern lamp

Sailboats up to 20m under sail

- 1 Bi-colour lamp
- 1 Stern lamp

Sailboats more than 20m under sail

- 1 All Round Red lamp Above
- 1 All Round Green lamp
- 1 Port lamp
- 1 Starboard lamp
- or 1 Bi-colour lamp
- 1 Stern lamp

Sailboats up to 20m under sail

- 1 Tri-colour lamp

Sailboats and Powerboats less than 50m at anchor

- 1 All Round White lamp

Sailboats and Powerboats more than 12m grounded

- 1 All Round White lamp
- 2 All Round Red lamps mounted above one another

Sailboats and Powerboats more than 12m not under command

- In addition to Port, Starboard and Stern lamps
- 2 All Round Red lamps mounted above one another

Sailboats and Powerboats more than 12m manoeuvring with difficulty

- In addition to Port, Starboard and Stern lamps
- 1 All Round Red lamp
- 1 All Round White lamp
- 1 All Round Red lamp mounted above one another

# IP Protection

## IP Degrees of Protection Definition

IP stands for International Protection, the IP degrees of protection are determined by DIN 40050 part 9. This standard exists to specify the exact protection of electrical equipment against penetration by solid foreign matter, including dust and water. The exact degree of protection is achieved by various tests.

eg; The IP rating of the 8517 series deck floodlight is listed as IP 6K 9K.  
This means dust tight and protected from high pressure cleaning.

### IP 6K 9K

First numeral

– Protection against the ingress of solid foreign objects (table 1)

Second numeral

– Protection against the ingress of water (table 2)

**Table 1:**  
Protection against the ingress of solid foreign objects (including dust)

X.....	not tested
0.....	not protected
1.....	solid foreign objects $\varnothing \geq 50$ mm
2.....	solid foreign objects $\varnothing \geq 12.5$ mm
3.....	solid foreign objects $\varnothing \geq 2.5$ mm
4.....	solid foreign objects $\varnothing \geq 1.0$ mm
5 and 5K....	dust protected
6 and 6K....	dust tight

**Table 2:**  
Protection against the ingress of water

X.....	not tested
0.....	not protected
1.....	vertical dripping
2.....	dripping (inclined 15°)
3.....	spraying
4.....	splashing
4K.....	same with increased pressure
5.....	jetting
6.....	powerful jetting
6K.....	same at increased pressure
7.....	temporary immersion
8.....	continuous immersion
9K.....	high pressure/steam jet cleaning

## LED Navigation Lamps

**Hella marine**   
Vision and Innovation

## LED Lighting Technology

**LED Navigation Lamp Technology**

Hella marine LED (Light Emitting Diode) navigation lamps provide power saving, highly visible and ultra durable lighting for reliability and safety at sea.

**Benefits of LED lighting technology;****Ultra Low Power Consumption.**

Combining efficient LED light sources with advanced optic technology, Hella marine LED products deliver more light output per watt than traditional bulb lamps and thus provide considerable power saving.

Hella marine NaviLED®PRO navigation lamps use less than 10% of the power required to run a 25W incandescent bulb navigation lamp certified to the same visible distance.

**No bulbs, No maintenance. Ultra long service life.**

Hella marine LED technology has no filaments to break, thus making the LED lamps extremely shock and vibration resistant for reliable illumination and safety. Our engineering team has developed a unique range of highly demanding tests to lift product reliability to new standards.

**Safe and highly visible.**

Advanced LED navigation lamp optics deliver optimal horizontal and vertical light distribution according to international standards. They provide enhanced visibility compared to bulb navigation lamps. Cut-off angles are ultra precise, clearly indicating a vessel's movement and heading.

**Fully sealed for life.**

Each Hella marine LED lamp is a completely sealed opto electronic device. Proven design, precision engineering, and the use of high impact acrylic materials ensures superior resistance to water, impact, UV and general wear and tear.

**Pre-wired with marine cable.**

Hella marine LED lamps are pre-wired with quality marine specification tinned cable. The cable is completely sealed to the lamp body providing time saving at installation and reliable electrical connection.

**LED**  
Multivolt

**Multivolt™ technology for durability and safety.**

Advanced Multivolt™ circuitry provides a uniform level of intensity for reliable and safe illumination across a range of DC inputs such as 8-28 volts or 9-33 volts.

Multivolt™ LED lamps can be connected to 12 or 24 volt systems without modification, providing full light performance and automatic compensation for low battery voltages and voltage drop over long cables and connections.

Hella marine Multivolt™ LED lamps are also reverse polarity and spike protected for enhanced durability even under severe voltage fluctuations.

**Electromagnetic Compatibility (EMC)**

All Hella marine LED products are electronic devices. Their electrical circuits contain components that suppress possible interference, both emission as well as susceptibility to immisions, to the limits prescribed in international standards.

## LED Lighting Technology

***BSH NaviLED® PRO Self Diagnostic Control***

Hella marine NaviLED®PRO BSH LED navigation lamps are type approved and certified according to the European norm EN 14744 by the German Federal Maritime and Hydrographic Agency (BSH) for German inland waterways and the open sea.

To ensure long term safety at sea, each NaviLED®PRO BSH navigation lamp is equipped with a sophisticated self diagnostic control.

A photometrical self-test is carried out by the lamp in periodic intervals. If the light output, and consequently the visibility, reaches a pre-determined value, the lamp activates 'Service Mode'.

Service Mode is indicated by the lamp flashing at a rate of 60 flashes per minute for 15 seconds as soon as the lamp is switched on. This will occur for 15 seconds every time the lamp is switched on until the unit has operated for 2000 hours.

After 2000 hours the Service Mode flash rate doubles to 120 flashes per minute for 15 seconds as soon as the lamp is switched on.

To ensure the lamp meets the light output criteria of its certification, Hella marine recommends the light module be replaced as soon as it enters this 2000 hour Service Mode stage.

The 2000 Service Mode flash rate should not occur earlier than tens of thousands of hours. By regular recreational boating standards, even with regular night sailing, this stage will hardly ever be reached.

***NaviLED® PRO Photometric Testing***

Hella marine NaviLED®PRO LED navigation lamps have ultra precise horizontal and vertical cut-off angles to clearly indicate a vessel's movement and heading.

Every individual NaviLED®PRO lamp is photometrically verified in production by a sophisticated goniometer to ensure compliance with the intensity and cut-off requirements of international navigation lamp standards.

After passing photometric testing, a unique serial number is laser engraved onto the lamp lens. This serial number is referenced to individual test reports which are electronically archived by Hella marine, ensuring international navigation lamp standards are consistently met.

Welcome to the future of navigation lighting,

**NaviLED®PRO from Hella marine.**

**Ultra durable, power saving LED navigation lamps  
for enhanced safety.**

**NAViLED®PRO**

- **Ultra low power consumption**
- **Ultra long service life**
- **Multivolt™**
- **Safe and highly visible**
- **Fully sealed for life**
- **UV and Corrosion resistant**
- **Shock and Vibration resistant**
- **Pre-wired**
- **Fit and Forget**

**Hella marine NaviLED®PRO lamps are a quantum leap forward in energy efficiency and durability.**

**Ultra low current draw.**

NaviLED®PRO lamps use less than 10% of the power required to run a bulb navigation lamp.

Port, Starboard and Stern lamps consume less than 3.2 watts combined !

**No bulbs, No maintenance. Ultra long service life.**

Hella marine LED technology has no filaments to break making NaviLED®PRO lamps extremely shock and vibration proof for reliability and safety in demanding conditions.

**Multivolt™ 9-33V DC.**

Advanced electronics ensure reliable illumination and lamp protection even under severe voltage fluctuations and low battery voltages.

**Safe and highly visible.**

Hella marine optics deliver 100% correct light output and enhance visibility compared to bulb navigation lamps. Each BSH lamp incorporates self diagnostic technology for long term reliability and safety.

**Fully sealed for life. IP 67 Certified.**

Each NaviLED®PRO lamp is a completely sealed unit. High impact housings ensure durability from waves and impact.

Ultra heavy duty BSH versions use high-tech Polyamide housings to offer superior strength in extreme conditions.

**Pre-wired with 2.5m of marine cable.**

Ensures time saving, waterproof installations.

**Internationally approved and now BSH Certified.**

Meets the requirements of COL REG, USCG, RINA.

BSH versions certified for German inland waterways and the open sea.

... the future of marine lighting

NaviLED®360 lamps feature single LED efficiency, advanced Multivolt™ electronics and precision engineered optics for reliable and highly visible all round lighting.

- Ultra low power consumption
- Ultra long service life
- No Bulbs
- No Maintenance
- Multivolt™
- Safe and highly visible
- Fully sealed for life
- UV and Corrosion resistant
- Shock and Vibration resistant
- Pre-wired
- Fit and Forget

NaviLED®360 lamps draw a fraction of the energy required to run a conventional 2 nautical mile bulb lamp. Hella marine LED technology has no filaments to break thus making the lamps extremely shock, vibration and impact resistant. They are completely maintenance free. High impact acrylic housings provide superior durability in demanding conditions.

NaviLED®360 anchor lamps have undergone extensive 'tested to destruction' programs to help lift product reliability to a new standard. Each lamp is a completely sealed and waterproof unit, UV and corrosion resistant.

Utilizing advanced Multivolt™ circuitry, NaviLED®360 lamps provide consistent illumination and safety from 9-33V DC, even under severe voltage fluctuations and low battery voltages.

Sealed within the base or aluminium pole, the compact Multivolt™ drive circuitry provides reverse polarity, spike and over-voltage protection for long life and reliable operation.

NaviLED®360 lamps meet the requirements of BSH, IMO COLREG 72, USCG, ABYC A-16 and RINA.

Available in a range of mounting bases and pole lengths, NaviLED®360 lamps are the answer for safe, highly durable and ultra energy efficient all round white lighting on commercial and recreational vessels.

610 mm	2LT 959 910-231	2LT 959 910-331

Pole slides out of base and is fixed in its fully extended position with locking collar.

**Submersible LED Lamps**

**Submersible LED Trailer Lamps**

**Advanced Hella marine LED trailer lamps are the ultra visible, maintenance free solution for reliable and safe boat trailer lighting.**

Designed and manufactured in New Zealand, Hella LED trailer lamps are completely sealed and maintenance free. They are also shock, vibration, UV and corrosion resistant and represent true 'fit and forget' technology.

Towing safety and trailer visibility is greatly enhanced. Hella marine LED trailer lamps incorporate an Ultra Wide Visibility Optic, significantly improving side visibility. Hella's use of ultra wide visibility optics far exceeds the minimum ECE/ADR requirements and provides following vehicles with higher light intensity and vehicle recognition, especially as vehicles turn on curves and corners.

Multivolt™ electronics reduce the effect of voltage drop, ensuring ongoing safety. This means Hella LED lamps perform at full brightness across a range of voltages from 8-28V DC, unaffected by voltage drop that can dull bulb lamps due to long cable runs, joins, terminals and plugs in a trailer's wiring.

**LED**  
Multivolt

**LED Submersible Rear Combination Lamp**

## LED Interior Lamps

**Hella marine**   
Vision and Innovation

## LED Lighting Technology

## Hella marine advantages

**Hella marine LED (Light Emitting Diode) interior, exterior and courtesy lamps provide power saving, highly visible and ultra durable lighting for reliability and safety at sea.**

### Benefits of LED lighting technology;

#### Ultra Low Power Consumption.

Combining efficient LED light sources with advanced optic technology, Hella marine LED products deliver more light output per watt than traditional bulb lamps and thus provide considerable power saving. As an example, Hella marine EuroLED white LED interior lamps consume 30% of the energy required to operate a traditional 10W interior lamp. Hella marine LED round courtesy lamps draw less than 0.5W each.

#### No bulbs, No maintenance. Ultra long service life.

Hella marine LED technology has no filaments to break, thus making the LED lamps extremely shock and vibration resistant for reliable illumination and safety. Our engineering team has developed a unique range of highly demanding tests to lift product reliability to new standards.

#### Safe and highly visible.

Hella marine LED interior and courtesy lamps deliver powerful efficient light in smooth and uniform light patterns, designed not to cause glare or discomfort. Glare elimination without performance loss is important with any LED lamp to maintain efficiency and safety. Powerful LED point light sources without optics can cause significant eye strain on prolonged exposure.

#### Fully sealed for life.

Each Hella marine LED lamp is a completely sealed electronic device. Proven design, precision engineering, and the use of high impact acrylic materials ensures superior resistance to water, impact, UV and general wear and tear.

#### Pre-wired with marine cable.

Hella marine LED lamps are pre-wired with quality marine specification tinned cable. The cable is completely sealed to the lamp body providing time saving on installation and reliable electrical connection.

### LED Multivolt

#### Multivolt™ technology for durability and safety.

Advanced Multivolt™ circuitry provides a uniform level of intensity for reliable and safe illumination across a range of DC inputs such as 8-28 volts or 9-33 volts. Multivolt™ LED lamps can be connected to 12 or 24 volt systems without modification, providing full light performance and automatic compensation for low battery voltages and voltage drop over long cables and connections. Hella marine Multivolt™ LED lamps are also reverse polarity and spike protected for enhanced durability even under severe voltage fluctuations.

#### Electromagnetic Compatibility (EMC)

All Hella marine LED products are electronic devices. Their electrical circuits contain components that suppress possible interference, both emission as well as susceptibility to immisions, to the limits prescribed in international standards.

## LED Lighting Technology

**Hella marine LED based lighting products are sophisticated opto-electronic devices designed for durable, highly energy efficient, maintenance free operation. Listed below are some key considerations when selecting LED based lamps for marine exterior and interior applications.**

### Lens and Optic Technology.

LED based marine general interior lighting is developing fast to become a viable solution for durable and highly energy efficient lighting. To take advantage of the ever increasing efficacy of the most advanced LEDs becoming available, highly efficient optic design is essential.

The goal for general LED interior lighting is the even illumination of a specified area or to highlight and illuminate features of a vessel.

All Hella marine LED lamps use integrated highly efficient optics, lens designs or Free-Form reflector technology to accurately capture and distribute the light available from the LED. Examples include:

- *Oblong LED step lamps with 30 degree down angle light beam to illuminate the tread of steps and stairs onboard without dazzle from the lamps themselves. (page 35)*
- *Round and Square LED courtesy lamps providing attractive uniform light patterns via an efficient optic and lens with embedded glass spheres for minimum light losses. (pages 30-33)*
- *EuroLED lamps employ an accurately machined optic and lens combination to provide an even spread of bright white light with minimum light losses. (pages 24, 26, 27)*
- *LED spot lamps use an innovative reflector to create a powerful interior spot light pattern without causing glare. (pages 28-29)*

### Optics and Eye Safety.

With the significant advances of LED brightness, eye safety considerations are increasingly important. It is essential for high power LEDs to be coupled with optic designs that protect the eye's retina from possible damage.

It is desirable for the entire lens area of a lamp to be evenly illuminated via an efficient optic rather than using a bundle of LEDs without any optic.

### Heat and thermal management.

Competent and well engineered thermal management of a LED device is essential for the long-term durability of Hella marine LED lamps. Well designed LED interior lamps save power and reduce the heat loading in a cabin compared to incandescent lighting.

A common misunderstanding is that LED's do not generate heat. In contrast to incandescent lamps however LED's like to 'run cold'.

High output LED's do generate heat, which needs to be coupled to surfaces designed to efficiently transport the heat away from the LED itself. LEDs that overheat, meaning the junction temperature of the LED rises above a set threshold, will permanently degrade and significantly reduce their luminous efficacy.

A noticeably 'hot to touch' exterior surface of a high output LED interior lamp provides some indication that the light output of the device will deteriorate within a few hundred hours. Well engineered LED devices will operate 'cool' or 'slightly warm' to the touch after many hours of operation.

The technical expertise of Hella marine in thermal management, coupled with superior optics and electronic design, ensures the long term durability of all our LED lighting products with minimal degradation over many years of service.

### Colour Temperature.

When selecting LED interior lighting, selecting the right colour temperature\* and a high \*Colour Rendering Index (CRI) is important.

\*Colour temperature - The description used to describe the effect of heating an object until it glows incandescently, the emitted radiation, and apparent color, changes proportional to the temperature; easily envisioned when considering hot metal in a forge that glows red, then orange, and then white as the temperature increases.

**Cool White** - A description of light with a correlated colour temperature between 4500 Kelvin (K) and 10000 K, usually perceived a slightly blue. **Warm White**, closer to incandescent lamps, starts at 3500 K and lower.

\*CRI or Colour Rendering Index - The calculated rendered colour of an object. The higher the CRI (based upon a 0-100 scale), the more natural the colours appear. Natural outdoor light has a CRI of 100. Common lighting sources have a large range of CRI.

Both Colour temperature and a high CRI are an important selection criteria when considering the installation of LED interior lamps for general lighting.

During the LED production process the exact colour temperature and the brightness of the finished product cannot be pre-determined with certainty. For this reason LEDs are selected after the manufacturing process into various brightness and colour temperature classes.

To achieve uniformity of our products, Hella marine uses only selected colour and brightness classes. In contrast the colour temperature and the CRI of an incandescent bulb or Quartz Halogen bulb is very uniform.

Hella marine describes warm white as a colour temperature closer to the output of a Halogen Bulb lamp. White describes a colour temperature in the bright white range, up to 5200 K.

Light in the 5200 K plus range may not enhance a vessels interior, compared to the warm white (yellow) tones of an incandescent lamp as colour temperatures above 5200 K can look 'cold' and 'clinical'.

Bright white colour temperatures reduce the visible colour of food, upholstery, carpets, timber, and also skin tones making skin appear pale and grey. Colour temperatures towards the 'warm white' range of 2800 K add life and vibrancy to people and objects.

### Colour temperature examples;

1850 K	Candle
2800 K	Halogen G4 Bulb (Incandescent lamp)
3000 K	Hella marine Warm White LED courtesy lamp
5200 K	Hella marine White EuroLED lamp
5400 K	Hella marine White LED courtesy lamp
6500 K	Daylight

## DuraLed® Lamps

LED  
Multivolt

Ultra durable and ultra powerful white LED lighting for interior / exterior applications.

Hella marine DuraLed® interior lamps offer ultra durable lighting for heavy duty interior and exterior applications including storage lockers, tender lighting and wet areas.

Completely sealed and highly resistant to vibration, saltwater and impact, DuraLed® LED lamps provide impressive light output and energy efficiency.

Multivolt™ technology provides consistent illumination and circuit protection from 9-33V DC, even under severe voltage fluctuations.

DuraLed® lamp reliability is second to none. Each lamp is completely waterproof, impact resistant and shock resistant, ensuring an ultra long service life.

Two powerful options are available. Diffusion lens lamps have a wide spread of light while the clear lens lamps have a more concentrated light pattern.

DuraLed® interior lamps are the answer for completely sealed, ultra reliable lighting on powerboats and yachts.

Completely sealed unit with robust mounting system

<b>Housing Description</b>	UV resistant, enhanced impact acrylic
<b>Light Source</b>	LED
<b>Installation</b>	Pre-wired with 2.5m of marine cable
<b>Operating Voltage</b>	Multivolt™ 9-33V DC

... the future of marine lighting

Power saving and durable chart table and general purpose interior lamps featuring Hella marine LED technology.

**LED**  
Multivolt

Hella marine LED lamps offer durable energy efficient lighting for a variety of interior applications including chart table and navigation area lighting, berth lighting and adjustable reading lights.

With a current draw of less than 2W (less than 0.16A @ 12V), these flexible LED lamps have an impressive white or red light output and are highly energy efficient. An ON/OFF switch is built into the head for easy operation.

Hella marine Multivolt™ electronics provide consistent illumination and circuit protection across a range of inputs from 9-31V DC.

Highly shock and vibration resistant, the lamps provide outstanding reliability. There are no filaments to break and the surface is cool and safe to the touch.

Available in in Red or White LED light with shaft lengths of 150mm or 400mm.

- **Ultra low power consumption**

# EuroLED

Power saving, completely sealed LED Lamps

**EuroLED interior lamps combine the power saving benefits of single LED technology with precision optics. This multi-purpose LED lamp provides impressive light output and energy efficiency.**

**LED**  
Multivolt

With a current draw of less than 4W (less than 0.33A @ 12V), EuroLED interior lamps save power onboard. They consume 40% of the energy required to operate a 10W incandescent interior lamp. Multivolt™ technology provides consistent illumination and circuit protection from 9-33V DC, even under severe voltage fluctuations.

The durability of EuroLED interior lamps is second to none. Each lamp is completely waterproof, impact resistant and shock resistant, ensuring an ultra long service life.

EuroLED interior lamps are the answer for completely sealed, ultra reliable and energy efficient lighting on powerboats and yachts.

- Completely sealed housing and cable entry.
- Pre-wired with 2.5m of marine cable.
- Mounting bosses eliminate torque load on housing.
- Heavy duty shroud clips over lamp body.

<b>Housing Description</b>	UV resistant, enhanced impact acrylic
<b>Light Source</b>	Single LED
<b>Installation</b>	Pre-wired with 2.5m of marine cable
<b>Operating Voltage</b>	Multivolt™ 9-33V DC

## Easy Fit LED Courtesy Lamps

Ultra compact, power saving and attractive LED lamps for a wide variety of interior and exterior lighting applications.

Light is radiated downward at an angle of 30° making these lamps ideal for illuminating onboard areas such as steps, stairs, toe kicks, storage areas, companion ways, deck fittings, signs and switches.

**LED**  
Multivolt

Available in Blue, White, Red and Amber light colours with white, black, satin chrome, chrome and gold plated covers.

Multivolt™ electronics ensure constant light output in 12V or 24V DC systems. Like all Hella marine LED products, Easy Fit lamps are completely sealed, shock and vibration resistant and represent reliable 'fit and forget' technology.

# EuroLED TOUCH

Advanced LED lamps with touch sensitive switching.  
Power saving and ultra durable.

***EuroLED Touch lamps provide red and white, blue and white or white only light using the latest completely sealed touch sensitive switching technology.***

**LED**  
Multivolt

Lighting control is beautifully simple with EuroLED Touch lamps. Touch the colour pad for red or blue light, the white pad for white light. On the dual colour versions, hold your finger on the pad for more than two seconds and the lamp will cycle through four dimming levels. Release your finger on the light level required.

Dual colour EuroLED Touch lamps can also be remotely operated from multiple points with 'off the shelf' ON/OFF/ON momentary switches. Holding one of the external switches for two seconds will synchronise the lamps to the same dimming level.

Light levels are 'remembered' by the lamps circuitry, even when a vessel's batteries are turned off. The lamp will always turn on at the colour intensity previously set, regardless of power interruption.

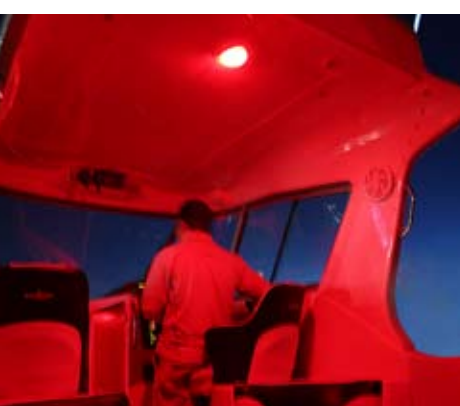

EuroLED Touch current draw is 4W on white (0.33A @ 12V) and less than 1.5W on red or blue (less than 0.125A @ 12V) to provide significant power savings.

Glare diffusion without light loss is important with any LED lamp to maintain efficiency and safety, particularly with powerful lamps such as the EuroLED series. Without the protection of advanced optics, significant eye strain can result from periods of looking directly into a powerful LED point source. Advanced Hella marine lens technology provides a safe, smooth and uniform light pattern, without glare or discomfort.

The durability of EuroLED Touch lamps is outstanding. Each lamp is completely waterproof, impact and shock resistant, for an ultra long service life. Multivolt™ circuitry provides consistent illumination across a range of input voltages from 9-33 DC, even under severe voltage fluctuations.

EuroLED Touch lamps overcome the poor reliability and light output problems of incandescent lamps. They provide ultra reliable, power saving lighting for all types of commercial and recreational applications.

## ***Night Vision*** ***- Why red light does not affect our night vision.***

The human eye contains two types of receptors, the rods and the cones. Rods and cones have an increased sensitivity to frequency bands at different ends of the visual spectrum. Rods are largely responsible for our day time and colour vision and have an increased sensitivity towards the red band of the visual spectrum. Cones are responsible for our night vision capability and have an increased sensitivity towards the blue, shorter wavelength band of the visual spectrum. For this reason red light will not affect the sensitivity of the cones and with that our night vision is not affected by the use of red light in the cabin.

## LED Spot Lamps

Power saving, high output white LED spot lamps featuring an innovative ring of ambient LED light.

Excessive heat and high power consumption problems associated with halogen down lights can now be overcome with Hella marine high output LED spot lamps.

Hella marine high output LED spot lamps generate over 450 candela. This is more peak and overall output (at a narrower angle) than light from a Hella marine down light running a 12V 10W G4 halogen bulb.

Completely sealed, shock and vibration resistant, Hella marine LED lamps provide outstanding reliability as there are no filaments to break. The surface is cool to the touch so will not cause damage to surrounding materials.

Consumption is less than 2.5W (less than 0.18A @ 12V), providing more than 75% power saving compared to a 10W halogen lamp.

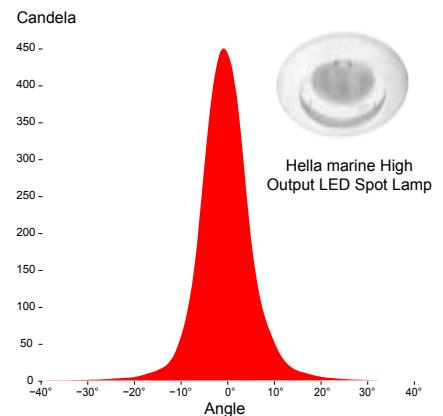

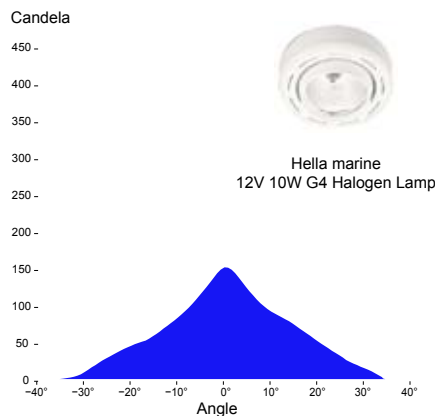

Bezels are available in polished or satin 316 stainless steel, gold plated stainless steel, and black or white high gloss plastic.

Unique 'non glare' reflector technology provides powerful light without discomfort to the eyes. Each lamp also features an outer ring of red, white or blue LED light providing additional ambient illumination. The ambient function consumes less than 0.5W and is switched independently.

Hella marine high output LED spot lamps are the answer for power saving and cool running interior lighting on powerboats and yachts.

Hella marine Multivolt™ electronics provide consistent illumination and circuit protection across a range of inputs from 9-31V DC.

### Hella marine 10W Halogen Lamp vs Hella marine High Output LED Spot Lamp

- Ultra low power consumption
- Ultra long service life
- Cool operating temperature
- No Bulbs
- No Maintenance
- Multivolt™
- Shock and Vibration resistant
- Pre-wired
- Fit and Forget

## LED Spot Lamps

Durable and power saving LED spot Lamps.

# Slim Line

## Round LED Courtesy Lamps

- Ultra low power consumption
- Ultra long service life
- Completely sealed
- Smooth and even light patterns
- Shock and vibration resistant

### Attractive, energy efficient lighting for interior and exterior use.

9 exciting colours with an installation depth of only 13mm and an advanced Hella lens for an even spread of soft light without glare or eye strain. Rims are available in polished or satin 316 stainless steel, gold plated stainless steel, black or white plastic.

Hella marine LED lamps consume a fraction of the energy of traditional bulb lamps and run very cool due to their low current draw. This provides safer installation into light weight materials where the heat of traditional lamps may cause damage to the surrounding structure.

Enhanced brightness versions are available in White and Warm White. These are three times brighter than regular Hella marine soft White and Warm White round LED lamps.

Hella marine LED technology has no filaments to break making the lamps extremely shock, impact and vibration resistant and completely maintenance free for an ultra long service life.

Each lamp is a completely sealed and waterproof unit, UV and corrosion resistant, perfectly suited for the demanding marine environment. Hella marine LED courtesy lamps represent energy efficient, maintenance free 'fit and forget' technology.

White enhanced brightness lamps with 316 stainless steel and gold plated 316 stainless steel rims.

- Completely sealed housing and cable entry.
- 50mm dia. installation hole when recess mounting.
- Pre-wired with 120mm of marine cable.

# Slim Line

## Square LED Courtesy Lamps

Attractive square LED courtesy lamps for a variety of modern interior and exterior installations.

Design driven with a shallow mounting depth of only 16mm, these power saving LED courtesy lamps can be installed almost anywhere on board. Advanced lens technology provides a cool and even spread of soft light without glare or eye strain.

Hella marine square courtesy lamps consume a fraction of the energy of traditional bulb lamps and run very cool due to their low current draw of less than 0.5W (less than 0.04A @ 12V). This provides safer installation into light weight materials where the heat of incandescent lamps may cause damage to the surrounding structure.

Hella marine LED technology is extremely shock, impact and vibration resistant. Each lamp is a completely sealed and waterproof unit, UV and corrosion resistant, perfectly suited for the demanding marine environment.

Enhanced brightness versions are available in White and Warm White. These are three times brighter than regular Hella marine soft White and Warm White square LED lamps.

Rims are available in gloss black or gloss white plastic, chrome or gold plated plastic or a modern satin chrome plated plastic.

Surface mounting accessory rings provide numerous installation options with surface finishes to compliment or contrast the lamp rims.

Hella marine LED lamps represent ultra reliable, energy efficient, 'fit and forget' technology.

<b>Material Description</b>	UV and impact resistant plastic
<b>Light Source</b>	4 LEDs
<b>Installation</b>	Pre-wired with 120mm of marine cable
<b>Operating Voltage</b>	12V or 24V DC
<b>Degree of Protection</b>	IP 67
<b>Mounting</b>	Recess or surface mount Stainless steel screws included
<b>Power Consumption</b>	0.5W

# LED Courtesy Lighting

Stylish, compact and power saving Hella marine LED courtesy lamps for interior or exterior installations.

Completely sealed and ultra durable, Hella marine LED courtesy lamps are ideal for illuminating a variety of onboard areas such as steps, stairs, toe kicks, storage areas, companion ways, deck fittings, signs and switches.

Engineered optics ensure an even spread of light without harsh point sources. With a low current draw of less than 0.5W (less than 0.04A @ 12V) Hella marine LED courtesy lamps are highly energy efficient. Multivolt™ versions ensure consistent illumination across a range of input voltages from 10-33 DC.

Available in Narrow Rim (22mm high) and Wide Rim (28mm high) sizes. Attractive trim accessories to fit **Wide Rim lamps only** are available in polished, satin or gold plated 316 stainless steel finishes.

<b>Material Description</b>	UV and impact resistant plastic

# LED Step Lighting

Dedicated LED step lamps. Stylish, compact and power saving interior or exterior lighting from Hella marine.

Completely sealed and ultra durable, Hella marine LED step lamps are proven the worldwide. Specifically engineered step lamp optics direct peak light downwards at 30 degrees to safely illuminate deck and step tread surfaces without shining into the eyes.

Hella marine LED step lamps are highly energy efficient with a current draw of less than 0.5W (less than 0.04A @ 12V). Multivolt™ electronics ensure consistent illumination across a range of input voltages and provide lamp protection for an ultra long service life.

Attractive trim accessories are available in polished, satin or gold plated 316 stainless steel finishes.

## CargoLED®

Ultra durable and ultra powerful white LED lighting for 'low profile' flush mounting into a wide range of interior and exterior applications.

Hella marine CargoLED® LED lamps offer ultra durable lighting for heavy duty interior and exterior applications including storage lockers, exposed surfaces and wet areas.

Completely sealed and highly resistant to vibration, saltwater and impact, With a current draw of only 6W, CargoLED® LED lamps provide impressive light output and energy efficiency.

Multivolt™ technology provides consistent illumination and circuit protection from 9-31V DC, even under severe voltage fluctuations.

The new lamps are built with a unique 'non-glaring' LED installation. This provides ultra efficient LED light without risking eye damage if the lamps are viewed directly.

CargoLED® lamp reliability is second to none. Each lamp is completely waterproof, impact resistant and shock resistant, ensuring an ultra long service life. The new lamps operate across a wide range of temperatures from -40 to +60 degrees.

CargoLED® LED lamps are the answer for low profile, ultra reliable and energy efficient lighting on powerboats and yachts.

# Thinlite

## LED Strip Lamps

Ultra durable and powerful LED strip lighting for low profile surface mounting into a wide range of interior and exterior applications.

Hella marine Thinlite lamps offer durable lighting in a unique surface mount design suitable for interior and exterior applications including storage lockers, under cabinetry, in cockpits, under gunnels.

The entire lamp body is a shallow 10mm thick and completely sealed. Thinlite LED lamps are highly resistant to vibration, saltwater and impact, with a current draw of less than 2W.

Advanced optics are employed to provide impressive light output and energy efficiency for almost any space onboard.

Vision and Innovation

## Introduction

The comprehensive range of Hella marine Deck Floodlights represents superior technology, high performance and durability.

Features include advanced lens and reflector designs for homogeneous light output, stainless steel mounting components and impact resistant housings for reliable operation at sea.

## Reflector systems used in Hella marine Deck Floodlights

**The Paraboloid Deck Floodlights**

A conventional deck floodlight has a light reflector in the mathematically defined shape of a paraboloid. The reflector captures the light of the bulb and reflects it initially focused parallel in the form of far-reaching pencil beam pattern. The specific light distribution pattern is then produced by the optical lenses and prisms in the profiled cover lens to achieve a precise distribution pattern.

Paraboloid reflector with profiled cover lens

**Modern FF (Free Form) Deck Floodlights**

In contrast to the paraboloid based technology, the task of the cover lens of distributing the light is integrated into the surface of the reflector which is shaped as a Free Form. The computer-calculated FF reflector produces the required beam pattern. The optical pattern still present in the cover lens enhances the uniformity of the light beam.

Advantages of FF technology:

- Small FF reflectors capture more light from the bulb and achieve a large working area.
- Much larger beam scattering can be realised for extremely wide beam patterns.
- The more homogeneous illumination means more pleasant working light with soft transitions at the edges without harsh contrasts.

Free Form reflector

## Introduction

## Xenon Gas Discharge (HID) Technology

**XENON**

HID Deck Floodlights differ from traditional bulb versions in that, instead of light being created by passing current through a filament to make it glow, light is created by an arc in a tube filled with a mixture of xenon gas and metal salts. The light arc is shock proof as there is no filament to break.

A compact 12V or 24V DC electronic ballast is used to ignite the HID bulb and provide constant levels of light output, even if the vessel's voltage supply fluctuates by up to 10%.

The advantages of using Xenon Gas Discharge (HID) deck floodlights in comparison to halogen versions include:

- 2.5 times the luminous flux (light output) and 35% less power consumption.
- Increased luminance results in a brighter and larger illumination of working areas.
- Light spectrum is similar to daylight – for natural colour reproduction of the environment.
- Vibration resistant light arc instead of a fragile filament.
- Service life up to five times longer – reduced expenditure for bulb replacement.
- Constant brightness – independent of fluctuations of up to 10% in the supply voltage.
- Only 42W power consumption – less strain on the vessel's power supply.

Free Form reflector with Gas Discharge (HID)

### Important information concerning mounting and operation of Xenon Gas Discharge (HID) technology.

- HID deck floodlights are supplied with a wiring harness, relay and fuse. The startup current of 20A (for 12V) or 10A (for 24V) requires a relay under all circumstances. A 20A fuse is required for 12V systems, a 15A fuse for 24V systems.
- Complete the electrical connection only with wiring harness supplied. When extending the wiring harness, sufficient cross section must be ensured. The internal resistance of the electrical connection (including relay, fuse and earth lead) between ballast and battery, must not exceed 150Ω (for 12V) or 300Ω (for 24V) under all circumstances. If the resistance is higher, the current of 20A (for 12V) or 10A (for 24V) required for ignition of the light arc cannot be reached. Inefficient ignition use can cause damage to the electronic ballast.
- Ignition problems can occur when a number of Xenon lamps are started simultaneously. This can result in damage to the electronic ballasts. For this reason it is strongly recommended to activate the lamps sequentially with a short time delay of approximately 5-20 seconds depending on the vessels electrical system.

## 6136 Series LED Mega Beam

The Hella marine LED Mega Beam is a close range deck floodlight providing all the reliability and power saving advantages of Hella marine LED technology.

Ultra reliable LED technology enabled the design of a compact marine floodlight suitable for applications subject to high vibration, impact and shock loads all in a completely sealed housing that needs no service. Supplied with stainless steel mounting hardware and pre-wired with 2m of marine cable, each lamp is a completely sealed 'fit and forget' unit.

Advanced Hella marine Free-Form reflector optics and LED technology combine to provide high intensity white light for close range homogeneous illumination.

Power consumption is 7W (0.58A @ 12V), or 15% of the energy required to operate a 55W H3 halogen floodlight, thus providing substantial power savings onboard. Hella marine Multivolt™ electronics provide consistent illumination and circuit protection across a range of inputs from 9-30V DC for an ultra long service life.

LED Mega Beam floodlights are the answer for energy efficient, completely sealed, shock and vibration resistant illumination.

9-30V	Black Housing	1GM 996 136-181

## Xenon Gas Discharge (HID)

**More light, greater safety, less power consumption, longer life and proven reliability in tough working conditions.**

Hella marine HID floodlights use a D2S Xenon bulb that provides up to 5 times the service life of a traditional halogen bulb. Due to advanced 'Free Form' reflector technology, Hella marine HID floodlights have 2.5 times the light output of halogen floodlights.

HID floodlights produce a white light very close to daylight, with a greater range and extremely wide deck illumination. The safety benefits of increased natural white light include easier viewing in dark working conditions and dramatically reduced eye strain.

A compact 12V or 24V DC electronic ballast provides constant levels of light output, even if the vessel's voltage supply fluctuates by up to 10%.

In addition, HID floodlights place less strain on the vessel's electrical system than halogen deck floodlights - total consumption is 42W - 35W for the bulb, 7W for the ballast.

**Features:**

- 2.5 times the light intensity of a 55W halogen bulb floodlamp.
- FF reflector provides an even illumination over an extremely large area with a light output very close to daylight.
- Only 42W power consumption – lower current requirements, less strain on the vessel's electrical system.
- Gas discharge bulb with 5 times the service life of a halogen bulb.
- Uses a shock resistant light arc instead of a breakable filament.
- Brightness is independent of supply voltage fluctuations.
- Lamp swivels vertically 105° and horizontally 360°.
- Operation temperature range -40°C to +105°C (body).

## 8505 Series Masthead / Floodlight Combination Lamps

**8505 Series**

Deck Floodlight and Masthead Lamp combined in one robust housing.  
Suitable for vessels less than 12m in length.

**Features:**

- 2 Nautical Mile Masthead lamp 2LT 003 562-00.
- Hella marine 'Free Form' reflector technology.
- Flexible mounting arms for mounting on a variety of mast profiles.
- Halogen reflector lamp (12V / 20W) with cover for moisture protection.
- All metal parts are stainless steel.
- Bulb replaces via opening in the cover.
- Black or White fibre reinforced housing

**Housing Description****Bulbs****Mounting****Degree of Protection****Maximum Output**

## 8504 Series Masthead / Floodlight Combination Lamps

**8504 Series**

Deck Floodlight and Masthead Lamp combined in one robust housing.  
Suitable for vessels less than 20m in length.

**Features:**

- 3 Nautical Mile Masthead lamp 2LT 002 984-30.
- Hella 'Free Form' reflector technology.
- Flexible mounting arms for mounting on a variety of mast profiles.
- Illuminates large areas of deck or superstructure.
- Glass lens bonded with reflector to be dust and moisture resistant.
- Covered bulbs for moisture protection.
- All metal parts are stainless steel.
- Black or White fibre reinforced housing

## Twin Beam Halogen Lights

### Powerful Twin Beam Hand Held Search Light

Hella marine hand held search lights are vital tools for night sailing and landing manoeuvres.

**Features:**

- Two reflectors and two halogen bulbs on separate switches.
- 55W bulb for close range. 100W bulb for long range. (12V Version)
- 2 x 70W bulbs. (24V Version)
- Trigger switch integrated into the grip allows morse code operation.
- Extended front edge for protection of the glass lens.

<b>Housing Description</b>	Shock and vibration resistant plastic High gloss aluminium reflector
<b>Bulbs</b>	1 x 12V / 55W H3 bulb included 1 x 12V / 100W H3 bulb included 2 x 24V / 70W H3 bulbs (24V version)
<b>Installation</b>	Spiral cable with cigarette lighter plug Extended length 3.5m
<b>Degree of Protection</b>	IP X6K

## Halogen Interior Lamps

### 8508 Series

Water resistant flush mount halogen lamps suitable for interior or exterior installations. The reflector uses a 10W bulb and provides the light output equivalent to a 20W bulb. (Bulbs up to 20W can also be used). Supplied with a silicon seal to prevent the glass lens from vibrating. Spring clip mounting.

<b>Housing Description</b>	Solid brass housing Stainless steel cover ring
<b>Bulb</b>	12V / 10W Halogen G4 included
<b>Degree of Protection</b>	IP 65
<b>Installation</b>	Pre-wired with 150mm of cable
<b>Maximum Output</b>	20W

## Fluorescent Lamps

### Transistorized Fluorescent Tube Lamps

Modern, attractive and power saving fluorescent lights for a variety of interior applications. The combination of advanced electronics and efficient compact fluorescent tubes ensures lower power consumption than incandescent lamps for the same light output.

**Further benefits include:**

- Flicker free noiseless operation
- Homogeneous spread of light
- Vibration and shock resistance
- Long service life
- Reliable ignition even at extremely low temperatures.
- Prevention of early blackening of the fluorescent tube.
- Reliable lighting for the complete service life of the tube.
- Reverse polarity protection
- ON / OFF switch integrated into housing
- Interference suppressed to VDE 0879

#### 7372 Series

## Contour Series Switch Panels with Circuit Breakers

### 4 Way and 8 Way 'Contour' Switch Panels with Circuit Breakers

Hella marine 'Contour' switch panels offer modern design with integrated circuit breakers and LED backlighting. The grey impact resistant fascia is complimented by a grey marine grade aluminium powder coated base plate. All panels are pre-wired, include mounting screws and are suitable for 12V or 24V systems.

#### Features:

- Airpax circuit breakers.
- Stylish impact resistant plastic fascia covering circuit breakers.
- Powder coated aluminium base plate.
- Green LED backlit labels.
- Red LED light indicates systems on.
- Bus bar.
- Screws and label set.
- Pre-wired.

#### 4 Way Switch Panel with Circuit Breakers

<b>Configuration</b>	1 x 5A / 2 x 10A / 1 x 15A
<b>Dimensions</b>	115 x 127 x 65mm (H x W x D)

# Micro Series Switch Panels

## Micro Switch Panels

Hella marine 'Micro' switch panel modules can be added together horizontally or vertically giving numerous installation options. Each module also has red and green LED backlighting. Circular labels allow vertical, horizontal, left or right mounting.

### Features:

- Switches protected by quality neoprene rubber boots.
- Green LED backlit labels.
- Red LED light indicates systems on.
- Gasket and label set. (9XT 998 010-001 comes standard)

**Dimensions** 86 x 58 x 28mm (H x W x D)

**Housing** Impact resistant plastic

**Degree of Protection** IP X5

**Switches** Rocker, momentary or 3 way ON/OFF/ON

**Maximum Load** 12V / 20A

### Micro Switch Panels

2 x ON/OFF rocker switches	8HG 998 514-091
1 x ON/OFF rocker switch, 1 x 3 way momentary switch	8HG 998 514-111
1 x ON/OFF rocker switch, 1 x ON/OFF/ON switch	8HG 998 514-131

### Bilge Alarm

8HG 998 514-171

Bilge alarm and bilge pump control panel includes 1 x ON/OFF/ON switch for auto manual control, plus 1 x warning light and alarm for high water level alarm. Same features as modules above.

### System Indicator panel

8HG 998 514-151

2 x LED indicators show systems in operation. Same features as modules above.

## Spare Label Sets

### 9XT 998 010-001

## Fans

**2 Speed "Turbo" Fans**

Universal fans from the versatile and well respected "Turbo" range. Can be turned and pivoted in all directions, and locked in position.

- Quality German motor provides very quiet operation.
- 150mm diameter fan blade with guard.
- High air moving capacity with low power consumption.
- Two speed switch in front of the blade guard.
- Side, upright or pendant mounting.

<b>Material Description</b>	Impact resistant plastic
<b>Switch</b>	Integrated 2 stage rotary
<b>Output</b>	Speed 1: 70 litres / sec. Speed 2: 95 litres / sec.
<b>Power Consumption</b>	6.5W
<b>Installation</b>	Pre-wired with 140mm of cable

**Fan "Turbo"**

12V Black	8EV 003 361-002
24V Black	8EV 003 361-012
12V White	8EV 003 361-022

**Single Speed "Jet" Fans**

Economy fans with similar styling to the popular "Turbo" models. Can be turned and pivoted in all directions, and locked in position.

- 130mm diameter fan blade with guard.
- Switch in front of the blade guard.
- Side, upright or pendant mounting.

<b>Material Description</b>	Impact resistant plastic
<b>Switch</b>	ON/OFF switch
<b>Output</b>	40 litres / sec.
<b>Power Consumption</b>	3.5W
<b>Installation</b>	Pre-wired with 140mm of cable

**Fan "Jet"**

12V Black	8EV 006 239-002
12V White	8EV 006 239-012

## Battery Switches

### 275 Amp Battery Master Switch

Contour Lock system with removable plates for connection from all sides. This allows the switch to be a stand alone unit or locked together with other switches. The control knob cannot be removed whilst in an ON or OFF position, however it can be removed by switching to an anti-clockwise 45° position. Suitable for surface or recess mounting by cutting a 52mm diameter hole.

<b>Material Description</b>	Impact resistant plastic Tin plated copper studs and nuts
<b>Termination Stud Size</b>	2 x 10mm (3/4")
<b>Operation</b>	ON / OFF
<b>Degree of Protection</b>	IP 56
<b>Max. Load 12 / 24V DC</b>	Continuous 275 Amps Intermittent 455 Amps (5 minutes) Cranking 1250 Amps (10 seconds)
<b>Max. voltage</b>	48V DC

### 275 Amp Battery Master Switch

6EK 998 540-001 Spare label set 9XT 998 011-001

### 600 Amp Battery Master Switch

Contour Lock system with removable plates for connection from all sides. This allows the switch to be a stand alone unit or locked together with battery distribution modules. The control knob cannot be removed whilst in an ON or OFF position, however it can be removed by switching to an anti-clockwise 45° position. Switch can also be padlocked. Suitable for surface or recess mounting by cutting an 85mm diameter hole.

<b>Material Description</b>	Impact resistant plastic Tin plated copper studs and nuts
<b>Termination Stud Size</b>	2 x 12mm (1/2")
<b>Operation</b>	ON / OFF
<b>Degree of Protection</b>	IP 56
<b>Max. Load 12 / 24V DC</b>	Continuous 600 Amps Intermittent 800 Amps (5 minutes) Cranking 2500 Amps (10 seconds)
<b>Max. Voltage</b>	48V DC

### 600 Amp Battery Master Switch

6EK 998 540-061 Spare label set 9XT 998 011-001

### 350 Amp Battery Selector Switch

Contour Lock system with removable plates for connection from all sides. This allows the switch to be a stand alone unit or locked together with battery distribution modules. Necessary for on board systems fed from 2 or more batteries and whose supply comes from more than 1 generator. Rotary switch in 4 switch positions of battery 1-2-Both-OFF. Switch can also be padlocked. Suitable for surface or recess mounting by cutting an 85mm diameter hole.

<b>Material Description</b>	Impact resistant plastic Tin plated copper studs and nuts
<b>Termination Stud Size</b>	3 x 10mm (3/4")
<b>Operation</b>	1-2-Both-OFF
<b>Degree of Protection</b>	IP 56
<b>Max. Load 12 / 24V DC</b>	Continuous 350 Amps - B1 or B2 Continuous 500 Amps - B1 and B2 Intermittent 500 Amps (5 minutes) Cranking 1500 Amps (10 seconds)
<b>Max. Voltage</b>	48V DC

### 350 Amp Battery Selection Switch

6EB 998 540-201

## Battery Switches and Battery Charger

### 50 Amp Battery Master Switch

Positive or negative cable can be switched as required. Key can be removed in the OFF position, current interrupted. Saltwater resistant.

<b>Housing Description</b>	Impact resistant plastic
<b>Cable Connection</b>	2 screw terminals, M10
<b>Degree of Protection</b>	IP X4
<b>Max. Load 12 / 24V DC</b>	Continuous 50 Amps
	Cranking 1000 Amps 12V (10 seconds)
	Cranking 500 Amps 24V (10 seconds)
	(compliant with VDA 72750)

### 50 Amp Battery Master Switch

6EK 002 843-011 Spare Key 9SL 706 729-011

### 100 Amp Battery Master Switch

Heavy duty switch for high loads. Key can be removed in the OFF position, current interrupted. Positive or negative cable can be switched as required.

<b>Housing Description</b>	Impact resistant plastic
	Steel key and mounting plate
<b>Cable Connection</b>	2 screw terminals, M10
<b>Degree of Protection</b>	IP X4
<b>Max. Load 12 / 24V DC</b>	Continuous 100 Amps
	Cranking 5000 Amps 12V (10 seconds)
	Cranking 2500 Amps 24V (10 seconds)
	(compliant with VDA 72750)

### 100 Amp Battery Master Switch

6EK 001 559-001

### 10 Amp Automatic 12V Battery Charger

Intelligent charger offers trickle charging and charging of completely discharged batteries. Also suitable for gel batteries. Quick charging function (from 7A to 10A). LED status indicator.

<b>Housing Description</b>	Impact resistant plastic housing
<b>Protection</b>	Over-charge and reverse polarity protected
<b>Charging</b>	Charging current 7/10A
	Charging cut off at 14.3V, Floating charge at 13.8V max. 1A

### 100 Amp Automatic 12V Battery Charger

8ES 417 417-041

### Spare label sets for battery master switches

9XT 998 011-001

#### Labels for 6EK 998 540-001

All master switches come standard with the battery symbol label. For installations where multiple switches are used it will be necessary to label the switches for different applications.

## Waterproof Plugs and Sockets

### Water Resistant Plugs and Sockets

Chrome plated brass plugs and sockets for exterior or interior installations.  
 Socket includes plastic cap.  
 Plug suitable for cable up to 6.5mm diameter.

<b>Material Description</b>	Chrome plated brass housings. Brass contacts
<b>Maximum Load</b>	22A at 12V
<b>Installation</b>	Screw terminals

### Water Resistant Plugs and Sockets

2 Pin	8JA 002 <b>620</b> -801
3 Pin	8JA 002 <b>807</b> -801
4 Pin	8JA 002 <b>957</b> -801

### Chrome Plated Brass Deck Glands

Ensures waterproof cable entry.

Cables up to 8mm diameter	9NM 004 <b>208</b> -001	18mm high x 32mm base diameter
Cables up to 12mm diameter	9NM 004 <b>209</b> -001	18mm high x 38mm base diameter

### Waterproof Plugs and Sockets

Watertight plastic plugs and sockets for exterior or interior installations.  
 Socket includes plastic cap.  
 Plug suitable for cable up to 8.0mm diameter.

<b>Material Description</b>	Impact resistant plastic housing Silver plated contacts
<b>Degree of Protection</b>	IP 67
<b>Maximum Load</b>	2, 3, 4 pin: 16A at 12V 7 pin: 10A at 12V
<b>Installation</b>	2, 3, 4 pin: Screw terminals 7 pin: Solder terminals
<b>Mounting</b>	2, 3, 4 pin: Flush mounting 7 pin: Surface mounting

### Waterproof Plugs and Sockets

2 Pin	8JA 006 <b>801</b> -801
3 Pin	8JA 006 <b>803</b> -801
4 Pin	8JA 006 <b>805</b> -801
7 Pin	8JA 006 <b>807</b> -801

### Surface Mounting Ring

For surface mounting of the socket.  
 Includes stainless steel screws and rubber gasket.  
 8XT 006 798-001

## Light Dimmer

## 2 Group Light Dimmer

**Features:**

- Precise dimming control for 1 or 2 light groups
- Voltage regulation & 'soft-start' bulb protection
- Low voltage battery protection
- 12V and 24V DC

The Hella marine 2 Group Light Dimmer provides precise dimming control for one or two separate light groups, and sophisticated voltage regulation with a 'soft-start' feature to lengthen the life of a filament bulbs. The dimmer also provides low voltage protection against deep battery discharge.

When batteries are charged voltage can rise to 14.4V on 12V systems or 28.8V on 24V systems, this can shorten the life of bulbs. The 2 Group Dimmer increases bulb life through sophisticated internal voltage regulation, ensuring the lighting circuit voltage does not rise above 12V or 24V. As halogen bulbs also have a high inrush current on start up, the 2 Group Dimmer features 'soft-start' to further lengthen bulb life.

The dimmers low voltage protection also protects against deep battery discharge. Lights will turn off automatically when battery voltage is lower than 9V on a 12V system or lower than 18V on a 24V system. Lights can be switched on again when the battery is charged and reaches 12V or 24V respectively.

<b>Max. Load</b>	200W at 12V and 400W at 24V
<b>Max. Load Per group</b>	100W at 12V and 200W at 24V
<b>Input Voltage Range</b>	8 - 30V DC
<b>System Voltage</b>	12V or 24V DC
<b>Number of Groups</b>	2
<b>Switches Per Group</b>	Unlimited
<b>Switch Type</b>	Momentary normally open
<b>Weight</b>	140 grams
<b>Protections</b>	Overload, Temperature, Low voltage
<b>Fuse</b>	2 x 10A

## 2 Group Light Dimmer

5XA 998 572-001

## Bilge Pumps

### Bilge Pumps

Hella marine bilge pumps are completely submersible, vibration resistant and maintenance free. Removable base plate allows cleaning of the intake chamber and also serves as a mounting plate.

**For reliable operation and safety Hella marine recommends the following rules be followed:**

- Use to pump bilge water only.
- Do not leave permanently submerged in water contaminated with oils or cleaning products.
- Test regularly.
- Clean the strainer regularly.
- Do not use with unreliable float switches.
- Do not use to compensate for a leaking vessel.
- Do not use as continuous duty live bait tank pumps.

#### 8TW 005 342-001

Pumping Capacity	1500 l/h / 400 GPH
Voltage	12V DC
Delivery Head	4.2m
Power Consumption	3.5A
Outlet Hose Internal Diameter	13.5mm
Outlet Hose External Diameter	20.0mm

#### 8TW 005 343-001

Pumping Capacity	2300 l/h / 600 GPH
Voltage	12V DC
Delivery Head	5m
Power Consumption	5A
Outlet Hose Internal Diameter	13.5mm
Outlet Hose External Diameter	20.0mm

#### 8TW 005 344-001

Pumping Capacity	6500 l/h / 1750 GPH
Voltage	12V DC
Delivery Head	4m
Power Consumption	10A
Outlet Hose Internal Diameter	25.0mm
Outlet Hose External Diameter	30.0mm

#### 8TW 005 344-011

Pumping Capacity	6500 l/h / 1750 GPH
Delivery Head	4m
Voltage	24V DC
Power Consumption	5A
Outlet Hose Internal Diameter	25.0mm
Outlet Hose External Diameter	30.0mm

## Replacement Bulbs

**Hella marine**   
Vision and Innovation

## Introduction

Hella marine bulbs are top quality products sourced from leading international bulb manufacturers.

### Incandescent Bulbs

Incandescent bulbs, also referred to as 'standard' bulbs, produce light by heating a filament until it is white hot. Incandescent bulbs become progressively dimmer over the course of their service life, because heating the filament makes it slowly burn away, with residue settling on the inside of the glass envelope.

### Halogen Bulbs

Halogen bulbs contain a gas mixture which consists of halogen compounds (usually compounds of iodine or bromine). Light is produced in much the same way as an incandescent bulb. However, when particles burn off the filament, they are returned by a chemical process involving the halogen in the bulb. This means that the light produced by a halogen bulb is relatively consistent over the course of the bulb's entire service life.

### Xenon Gas Discharge (HID) Bulbs

Xenon bulbs use an electric current arc passed through Xenon gas, rather than a filament, to produce light.

This method requires minimal electric current draw compared to filament lighting, and its output is comparable to daylight.

As the human eye has evolved to see in daylight, Xenon lighting causes less eye strain than other bulb types, making it a more convenient and safer night lighting option. Xenon bulbs increase reflections on road signs and markings.

#### Advantages of Gas Discharge (HID) Lighting

HID lighting is highly energy efficient producing approximately 90 lumens per watt compared to a quartz halogen lamp of approximately 25 lumens per watt.

- Light colour very similar to daylight – reduces eye strain.
- Steady brightness levels even if power supply varies.
- Impact and vibration resistant light arc ensures a bulb service life five times longer than standard bulbs.

### Light Output

Operating Voltage %	Light Output %
85	53
90	67
95	83
100	100

(Based on a mean operating voltage of 100% = 13.5V or 27V)

Light output for a filament light source is dependent on the voltage. Low voltage causes low output and shorter life, especially for halogen bulbs, because regeneration does not occur. Over voltage causes excessive tungsten erosion and the filament may prematurely break due to the filament being closer to its melting point.
